The aggregate base is less sensitive to moisture than the subgrade and it separates the pavement further from the subgrade. An aggregate base is recommended under all flexible pavements and particularly when the thickness of a full depth flexible design is very thin, approximately 5 inches (130 mm) (SN ~ 1.8) or less. The fine aggregate angularity (FAA) test is an indirect method of assessing the angularity of fine aggregate. II. Fine aggregate angularity is important because an excess of rounded fine aggregate (in the form of natural sand) can lead to rutting. III. The FAA test estimates fine aggregate angularity by measuring the loose uncompact void ...
